MEMORANDUM.

It has seemed desirable to bring together a series of maps showing in graphic form some of the more important field activities of the Department of Agriculture. It is impracticable to set forth all of the various lines of field work being conducted by the Department of Agriculture, but in the series of maps in this Atlas an attempt has been made to indicate the principal points where work is carried on, the character of the work under way, and in a measure something of the nature of the relationships with State services.

A legend accompanies each map and will make unnecessary further explanation here.

Attention should be called to the fact that the field activities of the Bureau of Plant Industry are of such a nature that several maps are necessary to show them.

In the case of the Forest Service, instead of indicating definite field activities, national forest areas, district headquarters, supervisors' headquarters, etc., are shown.
